

# Erica's Trip

## Octave Fuzz

This is Erica's Trip, a groovy octave-up fuzz with a two-stage boost so that you can get the subtle effects of a ringing octave over your playing, or you can boost it all to hell until you're seeing little green men.

## CONTROLS

There aren't many, as you may have noticed. However...

- Flipping the BOOST switch up will give you a huge power boost.
- Flipping the SUPER switch will give you even more of a boost.
- An internal trimpot to adjust the level of the boost.

# SWITCHING

This pedal features 3PDT true mechanical bypass switching.

# POWER REQUIREMENTS

This machine takes a standard 9 volt DC power supply with a 2.1mm negative center barrel. We always recommend pedal-specific, transformer-isolated wall-wart power supplies or multiple isolated-output supplies. Pedals will make extra noise if there is ripple or unclean power. Switching-type power supplies, daisy chains and nonpedal specific power supplies do not filter dirty power as well and let through unwanted noise. DO NOT RUN AT HIGHER VOLTAGES!

Current draw: 3ma

Input Impedance: ~5M (w/ boost)/~100kOhm

Output Impedance: <1kOhm

# WARRANTY

This machine has a limited lifetime warranty. If it breaks, we will fix it. Should you encounter any issues, please email [info@demonicmachines.com](mailto:info@demonicmachines.com)
