

# Octave Fuzz

This octave-up fuzz is based on an old DIY circuit called the “Buzz Box.” We beefed the circuit up and use one of our signature 1N3666 diodes to create a soul-shattering octave-up effect that’ll send your ear straight to hell.

## CONTROLS

The knob controls the volume. Turn it clockwise to increase the volume, and counter-clockwise to decrease it.

## SWITCHING

This pedal features DPDT true relay bypass switching.

## POWER REQUIREMENTS

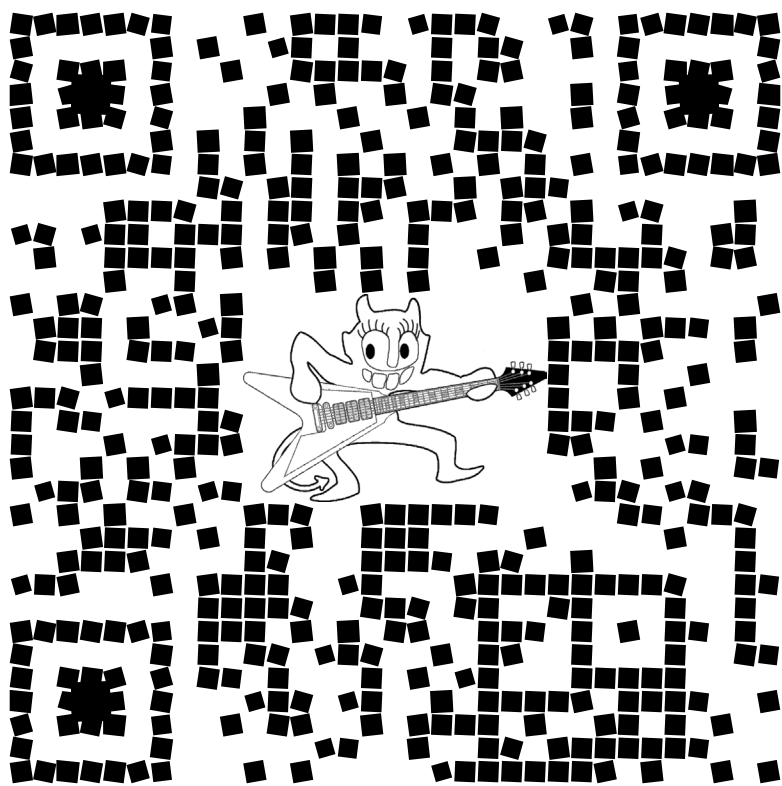

This machine takes a standard 9 volt DC power supply with a 2.1mm negative center barrel. We always recommend pedal-specific, transformer-isolated wall-wart power supplies or multiple isolated-output supplies. Pedals will make extra noise if there is ripple or unclean power. Switching-type power supplies, daisy chains and nonpedal specific power supplies do not filter dirty power as well and let through unwanted noise. **DO NOT RUN AT HIGHER VOLTAGES!**

Current draw: <60ma

## WARRANTY

This machine has a limited lifetime warranty. If it breaks, we will fix it. Should you encounter any issues, please email [info@demonicmachines.com](mailto:info@demonicmachines.com)
